

ABSTRACT OF THE DISCLOSURE

An improved chalk line tip for a chalk-line. The tip having a string attachment portion, having a first end configured to receive a pivot pin therein and extending in a generally arcuately shaped configuration toward a second end, which is also configured to receive a pivot pin therein. The string connection body defining an aperture dimensioned to allow passage of a portion of the attachment portion therethrough. A surface attachment portion having various devices for attaching the surface attachment portion to a surface to be marked. The tip is configured to allow various configurations of the attachment device to be presented and attached to a surface to be marked thus allowing for increased applicability and utility upon a variety of surfaces.
